

CSS - Anchor: Link

- ◆ In CSS, Links can be styled in many ways of CSS properties like color, font-family, background-color, font-size and text-alignment.

Sample Code:

```
<!DOCTYPE html>

<html>

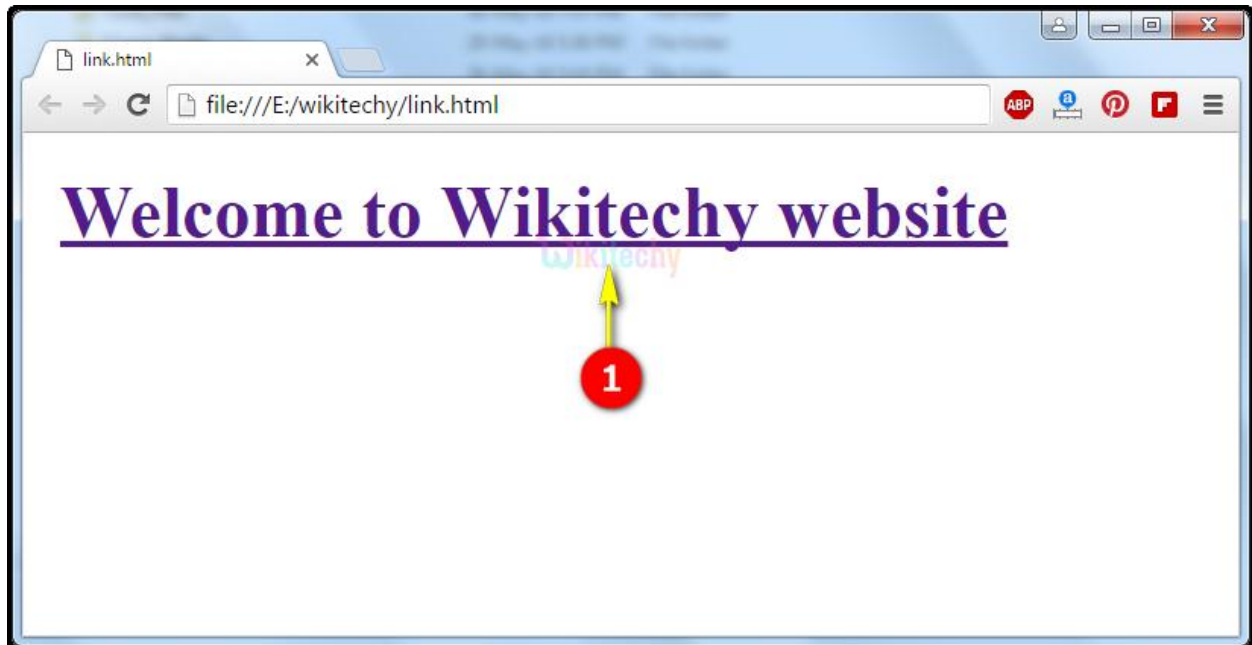

<head>
    <style>
        a : link
        {
            Color: red;
        }
    </style>
</head>
<body>
    <p><b>
        <a href="http://www.wikitechy.com/"target="_blank ">
            Welcome to Wikitechy website
        </a>
    </b></p>
</body>
</html>
```

Code Explanation:

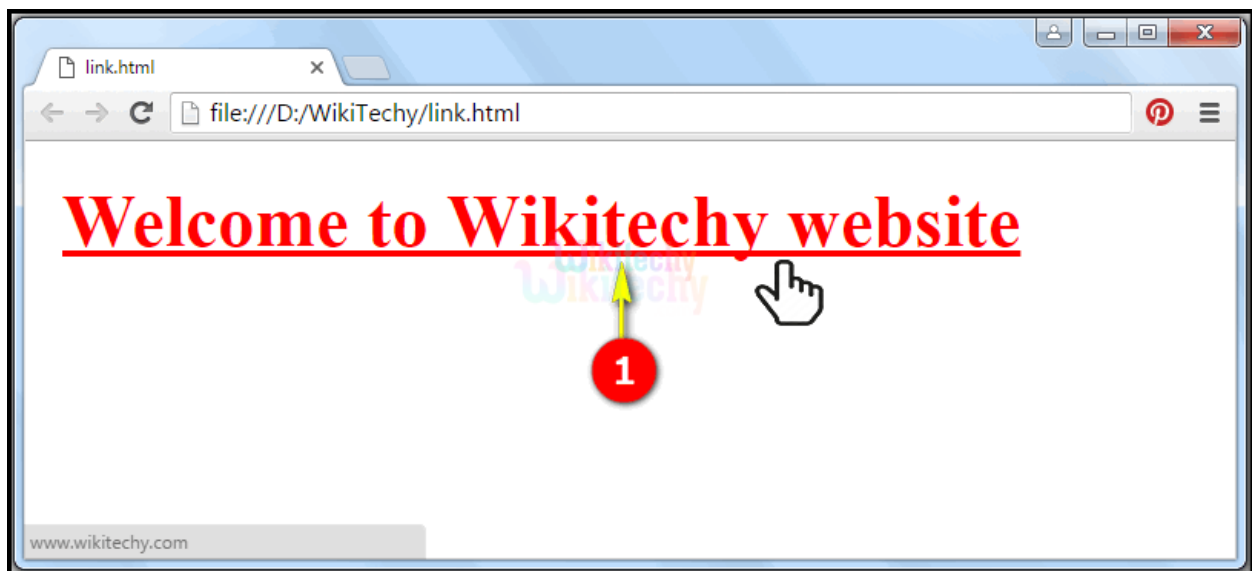

```
<!DOCTYPE html>
<head>
  <style>
    /* unvisited link */
    a:link ← 1
    {
      color: red;
    }
  </style>
</head>
<body>
  <p><b><a href="http://www.wikitechy.com/"
  target="_blank">Welcome to Wikitechy website
  </a></b></p>
</body>
</html>
```

- 1 Here this **a: link** Defines the style for normal unvisited links.
- 2 Over here the **href** is the attribute specifying the destination address of the URL.(Here, we are directing to **www.wikitechy.com**)
- 3 Here the **target="_blank"** specifies to Open up the **new tab**.

OUTPUT:

- 1** When we click the link it will change from blue to red which is displayed in the browser window as shown below.

- 2** On clicking this link, it will redirect us to the www.wikitechy.com website as shown below.
